icing event has on the wind power plant production in the short term, for example over the next hour. The icing impact was represented as a power loss, a simple multiplier, for the turbine describing the relation of power including the icing impact

### **Icing production loss module for wind power fore-casting**

Icing also occurs on towers, wind turbines, boats, oil rigs, trees and other objects exposed to low temperatures and water droplets. In cold climates on land, atmospheric icing can be common as elevated terrain interacts with cold clouds. Ice loads are a major cause of catastrophic failures of overhead electric power lines.

## **Atmospheric Icing of Power Networks - Masoud Farzaneh**

Springer Science, 2008, 388 pp. - ISBN: 978-1-4020-8530-7 Atmospheric ice takes a wide range of forms, usually quite beautiful and harmless. But it may, on occasion, pose severe risks to the security of many types of man-made structures, including power networks and transportation systems.

## **Farzaneh M. (Editor) Atmospheric Icing of Power Networks**

Information about the degree of "normal" icing amounts (= ice classes) for the site in question is used. For many areas, however, no information is available. Even in such cases, this document can be useful because local meteorologists or other experienced persons should be able to, on the safe side, estimate a proper ice class.

## **Standard - Atmospheric icing of structures (ISO 12494:2017**
