

chapter 8 recombinant dna pdf

Molecular cloning is the laboratory process used to create recombinant DNA. It is one of two most widely used methods, along with polymerase chain reaction (PCR), used to direct the replication of any specific DNA sequence chosen by the experimentalist. There are two fundamental differences between the methods.

Recombinant DNA - Wikipedia

A plasmid is a small DNA molecule within a cell that is physically separated from a chromosomal DNA and can replicate independently. They are most commonly found as small circular, double-stranded DNA molecules in bacteria; however, plasmids are sometimes present in archaea and eukaryotic organisms. In nature, plasmids often carry genes that may benefit the survival of the organism, for example ...

Falsch-positive Antikörper-ELISA-Ergebnisse werden dadurch erzeugt, dass die dem Patienten entnommene Flüssigkeit (z.B. Blutserum) eine Vielzahl von Epitopen auf Antigenen und Antikörpern (Oberflächenproteinen) enthält und einige von diesen Epitopen eine ähnliche ELISA-Reaktion auslösen wie das Epitop des gesuchten Bakteriums (OspC). Man nennt sie "kreuzreagierende Epitope".
